

## **Horizontal Flocculation Mixing Retrofit Upgrade**

Evolving Construction to Reduce Mechanical Failure and downtime, increase longevity

### **The Buckeye Retrofit Concept:**

Keeping the original concept of design, and strategically modifying components will provide the customer with exceptional service life. New modular design allows customer to add or remove mixing paddles easily to fine tune the effective mixing.

No physical modifications to the mixing chamber were necessary. Conversion was performed by BPI service technicians and downtime was held to only 1.5 days!
